

Protection

[Download and install Guardant SLK to get started with protection tools](#)

[Download Guardant SLK](#)

The following tools are used to link executable files of a software product to a license:

	Guardant Protection Studio A utility for binding executable files to a license (components created on Guardant Station), as well as to protect the program code from reverse engineering. Used for files written in C, C ++, C #, Delphi, etc.
	Guardant Licensing API A set of methods designed to be embedded in the source code of executable files.
